

INTERSPECIFIC RELATIONSHIPS

**Interactions between different species,
e.g. Tara Iti and shrimps**

INTERSPECIFIC RELATIONSHIPS

- Predator/Prey: One organism (predator) will actively hunt and eat another (prey).
- Competition: two or more organisms of same or different species compete to use the same limited resources or basic needs

Symbiotic Relationships

- Parasitism: an organism (parasite) lives in or on another (host) and feeds on it without immediately killing it
- Mutualism: a cooperative partnership between two species (both benefit)
- Commensalism: a relationship where one species benefits and the other remains unaffected
